

Evidence of Job market

Job prospects for animators are rising at a very fast pace thanks to the boom in the entertainment and gaming industry. Animation with time has got a good hold over movies, television and advertising industries due to the excessive use of special effects. Full length animation movies are in great demand. A single animation film requires as many as 500 animators, which means huge employment opportunities. Animation is one of the concrete, lucrative and demanding career options which serves both entertainment and education (e-learning) industries alike.[1]

Work opportunities for quality animators and related professionals like graphic designer, multimedia developer and game developer, character designers, key frame animators, 3D modelers, layout artists etc exists in following sectors at large:

- Advertising
- Online and Print News Media
- Film & Television
- Cartoon production
- Theatre
- Video Gaming
- E-learning

An animator and multimedia professional can also work as freelancer or start his / her own enterprise given he / she has entrepreneurial skills and funds for investments.[2]

Animators can use their skills in several different creative or design industries. While many studios produce motion pictures or television cartoons, others produce works to be used in advertising, software, and video games. In addition, animators can further specialize within their industry and may work on one particular feature of an overall project, such as special effects, lighting, or computer graphics modeling. Most animation artists who desire to fund their own projects work for a studio or motion picture company for a few years in order to establish their names before striking out on their own.[3]
